ELME Spreader Model 517 is a telescopic top lift spreader for handling of empty ISO containers weighing up to 10 tonnes. 517 is designed for mounting on reach stackers.

The strong and basic concept offers distinct advantages, such as two parallel telescopic beams, assuring max overlap. Beam sections dimensioned to absorb not only the vertical, but also the very considerable horizontal forces.

TWISTLOCK SYSTEM

The twistlock system is manufactured in a rugged design and is well-proven since many years. 517 has hardened ISO quick exchange pendular twistlocks. Hydraulically activated and mechanical interlocking against faulty locking and unlocking.

TELESCOPING, SIDESHIFT AND ROTATION SYSTEM

Telescoping is powered by one hydraulic cylinder inside each beam. Sideshift is executed by one hydraulic cylinder on the outside of the

mainframe. Rotation is done by a slewing ring with single transmission for turning and brake for holding.

CONTROL AND PROTECTION SYSTEM

Electrical systems monitor the state of the spreader at all times. Indicator lights advise the operator when the spreader is correctly seated, locked or not locked. Each signal is a precondition for the important protection functions of the spreader such as twistlock activation, telescoping and lift interrupt.
